

AIM

To design and develop an ATS (Applicant Tracking System) friendly resume using basic HTML, ensuring clean semantic structure, proper heading hierarchy, and machine-readable formatting without relying on complex CSS/JS elements that ATS parsers typically fail to read.

DESCRIPTION

ATS software scans resumes for keywords, structure, and formatting before a human ever sees them. Resumes built with tables, images, columns, or heavy styling often get misread or rejected by these systems. This task focuses on building a resume using only basic, semantic HTML — proper use of tags like `<h1>`–`<h3>`, `<p>`, `<ul>`/`<li>`, and `<section>` — so that the content remains linear, readable, and parsable. Key sections typically include Name/Contact Info, Objective/Summary, Skills, Education, Projects, and Experience, each marked up with appropriate heading and list tags to preserve logical structure and improve ATS compatibility.

Declaration

I hereby declare that the above information is true and correct to the best of my knowledge and belief.

Date: _____

RESULT:

Thus, an ATS-friendly resume was successfully designed and developed using basic HTML, with proper semantic structure ensuring compatibility with Applicant Tracking Systems.
